

An AI-Powered Legal Advisory and Case Intelligence System.

Project Synopsis:

The proposed project is a comprehensive Legal Case Management System designed to digitize and streamline law-firm workflows by integrating traditional case-management features with AI-driven legal assistance. The web-based application aims to improve client servicing, reduce administrative overhead, and support data-driven legal strategies. Core modules include Client Management, Case Management, Document Management, Legal Research Assistant, AI Contract Analyzer, Hearing Scheduler, Billing & Payments, Legal Chatbot, and Predictive Case Analytics.

Objectives:

- Centralize client and case information to enable quick retrieval and secure access.
- Automate document storage, versioning, and retrieval with metadata tagging and OCR for scanned files.
- Provide an AI-powered legal research assistant that suggests precedents, statutes, and relevant case summaries.
- Analyze contracts automatically to flag risks, obligations, and missing clauses using an AI Contract Analyzer.
- Schedule hearings and reminders with calendar integration and automated notifications for clients and lawyers.
- Handle invoicing, payments, and expense tracking with role-based access control.
- Offer a legal chatbot to handle routine client queries and collect case intake information.
- Deliver predictive case analytics to estimate case outcomes, timelines, and resource needs using historical data and ML models.

Functional Modules:

- Client Management: Create/update client profiles, contact history, confidentiality flags, and secure document links.
- Case Management: Case creation, status tracking, task assignment, timelines, and linked client/court details.
- Document Management: Upload, OCR, version control, tags, full-text search, and access logs.
- Legal Research Assistant: Query-based search, ranked references, summarized case law, citation links.
- AI Contract Analyzer: Clause classification, risk scoring, obligation extraction, redline suggestions.

- Hearing Scheduler: Calendar view, court-location mapping, auto reminders (SMS/email/WhatsApp), and conflict checks.
- Billing & Payments: Generate bills, customizable templates, payment gateway integration, ledger reports.
- Legal Chatbot: Guided intake forms, FAQ handling, triage to human staff, multilingual support.
- Predictive Case Analytics: ML models for outcome probability, expected duration, cost estimates, and visualization dashboards.
